

I'm not yet even a satellite subscriber, but I have worked in the broadcasting industry for several decades. I can honestly say that I have never seen the National Association of Broadcasters take one action, lobby for one legislative agenda, that was not self-serving to the point that it worked against the interest of American consumers.

I urge you to reject NAB's Petition 01-160. The broadcasters of America have been given enough of a license to print money, with zero regard for the public interest, and must not now also be permitted to stifle progress and new technologies, so that they can have even more.
